## OBJECTIVE

Results-driven MCA student at BVIMIT with a strong foundation in full-stack development, data structures, and AI-integrated applications. Proficient in Java, Spring Boot, React, and Python, with hands-on experience building and deploying scalable web applications and desktop tools. Passionate about writing clean, efficient code and applying emerging technologies to solve real-world problems. Seeking a challenging software engineering role where I can contribute meaningfully, grow alongside talented teams, and develop into a well-rounded professional.

## EDUCATION QUALIFICATION

**Pursuing Master in Computer Applications - Mumbai University** 2025 - 2027
Bharati Vidyapeeth's Institute of Management and Information Technology, Navi Mumbai

**BSC CS (Bachelor of Computer Science) - Mumbai University** 2022 - 2025
B.K. Birla College of Arts, Science and Commerce, Kalyan CGPA - 9.37

**Higher Secondary Certificate (XII)** 2020 - 2021
B.K. Birla College of Arts, Science and Commerce, Kalyan 79.33%

**Secondary School Certificate (X)** 2019 - 2020
Shree Gajanan Vidyalay, Kalyan 83.20%

## SKILL SET

- **Programming Languages:** Java, Python, JavaScript
- **Frontend Technologies:** HTML5, CSS3, Tailwind CSS, Java Swing, Java AWT
- **Backend Technologies:** Spring Boot, REST APIs
- **Databases:** MySQL, MongoDB, Firebase
- **Core Concepts:** Object-Oriented Programming (OOP), Data Structures
- **Tools & Platforms:** Git, GitHub, VS Code, IntelliJ IDEA, Android Studio, MS Office
- **Operating Systems:** Windows, Linux

## PROJECTS

**AI Trip Planner** **Jan 2025 – Apr 2025**
Technologies: JavaScript, React (Vite), Tailwind CSS, Google Places API, Google Gemini API

- Developed a full-stack AI-powered trip planning web application that generates personalised, day-wise travel itineraries based on user inputs including destination, budget, trip duration, and travel preferences.
- Built a responsive, mobile-friendly frontend using React (Vite) and Tailwind CSS, delivering fast load times through Vite's HMR and optimised production bundling.
- Integrated Google Places API to fetch real-time location data, ratings, photos, and place details, enriching itinerary cards with live, accurate information.
- Leveraged Google Gemini API with structured prompt engineering to produce context-aware, activity-rich itineraries covering hotels, tourist spots, and restaurants in a consistent JSON schema.
- Implemented Google OAuth 2.0 authentication for secure user sign-in and persisted user trip history using Firebase Firestore for real-time data sync across sessions.
- Optimised API call performance using debouncing and lazy loading strategies, ensuring a smooth and responsive user experience even on slower network conditions.

**PhishGuard – Phishing Detection System**
Technologies: Python, Machine Learning, Random Forest, Flask, React, Chrome Extension (Manifest V3), SQLite

- Developed a phishing detection system that analyses website/URL features and classifies websites as legitimate or phishing using a Random Forest machine learning model.
- Built a Flask REST API with a "/predict" endpoint to process URL features and return phishing predictions and risk scores.
- Developed a Chrome Extension using Manifest V3 to provide real-time phishing detection while users browse websites.
- Built a React-based dashboard to display detection history, model performance metrics, confusion matrix, ROC analysis, and phishing trends.
- Trained and evaluated the Random Forest model using an 80:20 train-test split, achieving 94.07% test accuracy and 94.03% 5-fold cross-validation accuracy.
- Used SQLite/local browser storage for detection history and incorporated trusted-domain handling to help reduce false positives.

**Graph Algorithm Visualiser** **Jan 2026 – May 2026**
Technologies: Java, Java Swing, Java AWT

- Developed a feature-rich interactive desktop application in Java using Swing and AWT that allows users to build custom graphs and watch graph algorithms execute step-by-step with real-time graphical feedback.
- Implemented animated, step-by-step traversal for BFS and DFS algorithms, colour-coding visited nodes (blue), active frontier nodes (yellow), and unvisited nodes (grey) for clear visual distinction at each iteration.
- Visualised Kruskal's and Prim's Minimum Spanning Tree algorithms with dynamic edge-weight labels, highlighting MST edges in green as they are selected and rendering the final spanning tree distinctly from non-tree edges.
- Enabled a fully interactive graph editor — users can add, move, and delete nodes and weighted edges directly on the canvas via mouse events, with the adjacency list updating in real time behind the scenes.
- Designed a control panel with Play, Pause, Step Forward, and Reset buttons, giving users granular control over algorithm playback speed and the ability to rerun simulations on the same or a new graph.
- Applied OOP principles with a clean separation of concerns — Graph, Node, and Edge model classes decoupled from the Swing renderer, enabling maintainable code and easy addition of new algorithms.

## SEMINARS / WORKSHOPS

- Successfully Completed MERN Stack Workshop organised by B.K. Birla College.
- Successfully Completed 'Build with AI' Workshop organised by Google Developer Groups.

## CERTIFICATIONS

- **JavaScript for Beginners** – *Udemy*
- **Data Structures and Algorithms** – *Coursera*
- **Programming in Java** – *NPTEL*
- **Cloud Computing** – *NPTEL*

## ACHIEVEMENTS

- Successfully volunteered at ICET 2026, an international research paper publishing conference held at Bharati Vidyapeeth's Institute of Management & IT (BVIMIT), Navi Mumbai, contributing to the smooth organization and coordination of the event.
- Successfully conducted Mathan 2026, a technical event at BVIMIT, as a core member of the Registration Team managed participant registrations, coordinated on-ground logistics, and ensured seamless event execution from start to finish.
